

Owens Design

YOUR DESIGN + BUILD PARTNER

Electrical Engineering Wizard

Are you tired of working on the same product year after year? Do you spend more time sitting in meetings and navigating politics than actually designing? Do you long to work daily on what you do best and have your contributions really matter?

Owens Design works with the leaders and future leaders of the cutting edge technologies that are helping the world. Your contributions will make their ideas a reality through a collaborative and efficient process. You will experience the excitement of a start up, the stability of an established industry leader and the backing of a company run by engineers. From placing your own purchase orders to working with a lean team of seasoned engineers, you will have the freedom and responsibility to accomplish more than you can imagine. We want you to spend your time doing what you do best – designing!

The ideal candidate will be a seasoned electrical engineer in automation and tool development from concept to tool build. The key to success in this role includes the electrical design of complex capital equipment on accelerated schedules creating multiple production worthy prototypes every year. You will work collaboratively with customers, program managers, mechanical and software engineers and manufacturing through the entire new product development lifecycle. A working knowledge of CE, NFPA and SEMI standards, power distribution, and motion controls are critical.

If you would like to join this growing team, please send your resume to jobs@owensdesign.com along with a 1/2 page write up of your most significant design. We value what you have done – not just where you have been.

Why work for us?

For over 25 years, Owens Design has specialized exclusively in designing and manufacturing complex, advanced technology systems. We have focused specifically on the semiconductor, hard disk drive and solar photovoltaic industries, and have turned product development into a science. This unique process has made us successful and attracted a world-class following. We value people who are passionate about collaboration, creativity, and quality. We rigorously focus our energy on the solutions and processes to achieve our and our customer's goals.
