Owens Design Hires Lauren Ravenscroft as National Sales Manager

Fremont, California: Owens Design Inc. a leading design and manufacturing service provider to the semiconductor, data storage and solar capital equipment markets, today announced the hiring Lauren Ravenscroft, a 17-year semiconductor equipment industry veteran, as the company's National Sales Manager. In her new position, she will drive Owens Design's continued commitment to help its customers reduce the cost and time involved in the development and deployment of leading-edge, high-volume, production-worthy manufacturing equipment.

"Lauren's years of experience in a wide range of semiconductor equipment manufacturing technologies gives her the expertise needed to understand our customers core technologies and volume-production requirements, making her ideal to drive Owens Design's continued growth in our three key market areas," said Mark Danna, Owens Design's Sr. Director Business Development.

"Working at Owens Design, I will have the opportunity to leverage my semiconductor industry experience—in helping customers turn a process technology into production-ready manufacturing solutions—in the growing solar industry, as well as the semiconductor and HDD markets." said Ms. Ravenscroft.

"While our customers focus on developing their core process technologies, we provide them with critical platform development expertise, helping to ensure system reliability and serviceability, fast lead times, and scalability to high volume production."

Prior to joining Owens Design, Ms. Ravenscroft worked at Applied Materials (AMAT), where she was an Account Manager in its North American sales organization. During her tenure at AMAT, she also served as Worldwide Sales Manager for a major focus account, and Business Development Manager in the PVD business group. Before joining Applied Materials, she held various marketing positions at Advanced Micro Devices and National Semiconductor.

About Owens Design

Owens Design specializes in engineering and manufacturing of capital equipment. Located in Silicon Valley for over 25 years, they have been a strategic partner in the co-creation and manufacturing process for many leading OEM capital equipment companies. Owens Design engineers and manufactures customer's products from concept, through alpha, beta, pilot and on-going production. Their development process results in a rapid design cycle and concurrent manufacturing introduction. Owens Design has and continues to be an innovative and reliable partner for equipment companies in the semiconductor, solar and related industries.
